GENERAL INFORMATION

Substrate and Sheeting Selections

{Substrate-the type of backing used for the sign} {Sheeting-the material used to make the face of the sign}

Substrate

ALUMINUM—Aluminum is the substrate used most frequently for signs, because it is durable, light weight and rustproof. Standard sizes are .080 and .100 gauge, .080 is used for signs with dimensions under 24 inches and .100 is used for signs with dimensions 24 inches and over. We use 5052H38 aluminum, conversion coated to meet all state and federal specifications.

PLASTIC—Plastic is normally used for interior signs and smaller signs but it may be substituted for aluminum in other cases.

MAGNETIC—Magnetic signs are used for non-permanent locations on ferrous metal surfaces.

Sheeting

NON -REFLECTIVE —Most effectively used during daylight hours for signs that do not have to be read at night or in the dark.

ENGINEER GRADE—The standard reflective sheeting used on most signs.

HIGH-INTENSITY—Used on signs where high reflectivity is needed, such as situations where vehicles are traveling at high speeds.

DIAMOND GRADE—Extremely High Reflectivity.

ORDERING INFORMATION

When ordering standard signs please specify size, description, color, MUTCD (Manual on Uniform Code Devices) number, substrate, sheeting, catalog number and any specific information noted by the catalog. The “standard size” for each sign will be underlined beside the sample image.

Sign Sizes are Width x Height

Example 1: 30" x 30" Stop R1-1 100 ga. Eng Grade

Example 2: 36" x 48" Speed Limit R2-1 100 ga. Hi Int. 55(MPH)
